

# Who We Are & What We Do

*GoRan AI is a premier, engineering-first AI automation agency.*

We bridge the gap between complex AI capabilities and real-world commercial operations. We don't build technology for the sake of novelty. Our core philosophy is simple: **We engineer smart, custom tools that solve actual manual bottlenecks, reduce staff workloads, and accelerate sales conversion.** We specialize in building autonomous voice callers, centralized CRM architectures, custom data synchronization nodes, and sleek interactive frontends.

## Core Service Capabilities

| SERVICE LINE                                                                                                   | DURATION                | OUTCOMES & DELIVERABLES                                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AI Scoping &amp; Operational Audit</b><br>Map manual friction points and outline system integrations.       | <b>2 - 3 Weeks</b>      | <ul style="list-style-type: none"><li>• A comprehensive <b>AI Opportunity Report</b></li><li>• ROI Assessment Matrix</li><li>• 8-Week Technical Implementation Roadmap</li></ul>                                               |
| <b>Custom AI Product Engineering</b><br>End-to-end builds of agentic backends, voice agents, and web portals.  | <b>6 - 12 Weeks</b>     | <ul style="list-style-type: none"><li>• Automated calling agents (LiveKit/Gemini Realtime)</li><li>• Centralized CRM data hubs &amp; APIs</li><li>• Headless storefronts &amp; automated notification nodes</li></ul>          |

| <b>AI Workshops &amp; Training</b><br>Train internal operations staff on prompt engineering and no-code tools. | <b>1 - 4 Weeks</b>      | <ul style="list-style-type: none"><li>• Customized prompt books and templates</li><li>• Training on automation stacks (Make, Zapier)</li><li>• Creation of company-private knowledge wikis</li></ul>                           |

# Our Delivery Framework

*How we take a project from scoping blueprint to deployment-ready code.*

## 1. Audit & Discovery

We audit database logs, analyze sales response bottlenecks, map staff schedules, and inspect manual workflow leaks. We establish a quantitative baseline of current times and costs.

## 3. Agile Engineering Cycles

We develop in rapid, bi-weekly sprints with active Git repositories. Clients receive weekly demo reviews to ensure complete alignment and layout feedback.

## 2. Architecture Blueprint

We design the API data pathways, select LLM endpoints, calculate latency budgets, outline interface layouts, and present a fixed scoping quote before writing code.

## 4. Deployment & Hand-off

We launch on secure cloud infrastructures (Vercel, AWS, Render), integrate real-time health monitors, configure backup syncs, and conduct hands-on training sessions.

# Our Production Technology Stack

We build solutions on robust, standardized, and modern framework layers. This ensures that the systems are easily maintainable, scalable, and secure.

|                                                                                                                                                                                 |                                                                                                                                                                                               |                                                                                                                                                                                                       |

# Client Implementations: Part I

*Real operations transformed with automated intelligence.*

## CASE STUDY 01: ANAAJ AI

**Headline:** How GoRan AI Engineered Rural India's Leading Multilingual AI Agriculture Suite & Centralized CRM

**Timeline:** 45 Days

**Business Impact:** 12k+ Queries Resolved

**The Challenge:** Rural farmers struggled with delayed crop disease diagnostics, fluctuating mandi prices, and lack of localized advisors. Existing apps were too complicated and lacked local language speech options.

**The Solution:** Designed a React Native app linked to a custom Gemini model answering queries in regional dialects. Built a sub-10 second crop health diagnostic image classifier and a grower CRM system.

**Outcomes:** Crop scan diagnostics automated with 94% accuracy. Localized speech AI chatbot resolves grower questions autonomously, reducing manual support agent overhead by 85%.

## CASE STUDY 02: HERBSERA

**Headline:** Deploying E-Commerce Tech Architectures, Centralized CRM, & Real-Time Outbound Calling Agents

**Timeline:** 40 Days

**Business Impact:** 92% Support Automated

**The Challenge:** HerbsEra faced fragmented client interactions across social media, web, and support calls. Abandoned checkout carts, shipping follow-ups, and support queries were managed manually.

**The Solution:** Built a centralized customer database CRM mapping Next.js storefront checkout events. Deployed automated WhatsApp support chats and an AI voice caller using LiveKit/Gemini APIs.

**Outcomes:** Support ticket workloads fell by 92%. Automated WhatsApp recovery sequences and outbound voice calling agents increased cart recovery checkout completions by 22% in 30 days.

# Client Implementations: Part II

*Direct D2C automation and interactive corporate portals.*

## CASE STUDY 03: HADOTI FARMS

**Headline:** Scaling Headless Storefront Gateways & Automated Fresh Stock Logistics Pipelines

**Timeline:** 30 Days

**Business Impact:** 3.5x Monthly Order Volume

**The Challenge:** Fresh crop produce required instant warehousing dispatch. Spreadsheet tracking led to stock out-of-syncs, overselling, and manual shipping update delays.

**The Solution:** Designed a headless, high-speed storefront on Vercel. Engineered an inventory routing system linking checkout triggers directly to warehouse dispatch nodes on WhatsApp.

**Outcomes:** Boosted monthly order output capacity by 3.5x. Order errors fell to zero. Automated harvest-to-dispatch WhatsApp tracking reduced delivery support inquiries by 94%.

## CASE STUDY 04: CODEWAVE

**Headline:** Re-engineering High-Fidelity Interactive Digital Portals & Optimized SEO Architectures

**Timeline:** 20 Days

**Business Impact:** +200% Web Engagement

**The Challenge:** Codewave's static legacy website failed to represent their advanced IT expertise. High bounce rates, sluggish load speeds, and poor crawl optimization yielded zero leads.

**The Solution:** Developed a custom React site from scratch. Programmed fluid animations, custom layout transitions using GSAP and Framer Motion, and set up semantic HTML schema tags.

**Outcomes:** Session durations rose by 2.2 minutes; bounce rate fell by 45%. Google PageSpeed score reached 99/100, resulting in a 150% organic search impressions growth in 45 days.

# Client Implementations: Part III

*Geographical route dispatch and automated service onboarding.*

## CASE STUDY 05: GREENWRENCH SOLUTIONS

**Headline:** Developing Field Service Portals & Automated Geographic Lead Routing Databases

**Timeline:** 28 Days

**Business Impact:** 88% Faster Lead Response

**The Challenge:** Floods of service requests across multiple cities led to scheduling bottlenecks. Manual matching caused booking dispatch delays, workload conflicts, and lost customers.

**The Solution:** Built a custom repair booking portal. Programmed a geo-routing engine mapping technician location data and availability to assign tickets automatically on WhatsApp.

**Outcomes:** Customer lead dispatch times dropped from 4 hours to under 2 minutes. Automated technician workloads increased utilization metrics by 34% with zero schedule clashes.

## CASE STUDY 06: A ROBOTICS SERVICES

**Headline:** Engineering Diagnostics Booking Portals & Calendar API Synchronization Flows

**Timeline:** 35 Days

**Business Impact:** 65% Scheduling Automated

**The Challenge:** Robotics diagnostic intake required complex troubleshooting details. Scheduling diagnostics and allocating technician calendars manually caused slow customer loops.

**The Solution:** Developed an onboarding portal with a technical diagnostic questionnaire. Programmed direct API calendar syncing that maps slots and allocates service tickets.

**Outcomes:** Automated 65% of diagnostics intake and service booking loops with zero manual back-and-forth emails. Technical onboarding time dropped from 3 days to under 5 minutes.

# Partnering with GoRan AI

*Our onboarding blueprint to run a custom scoping audit on your operations.*

We make the transition to intelligent, automated operations seamless. Here is the detailed process to begin a deployment cycle with our engineering team:

## 1. The Initial Scoping Consultation (30 Minutes)

We discuss your current technical stack, document your team's most time-intensive manual tasks, and outline how AI models (vision, text, voice) can be integrated. You can request this call directly on our website at <https://goran.in> or by writing to [contact@goran.in](mailto:contact@goran.in).

## 2. The Operations Audit & ROI Mapping

If we align on feasibility, we run a 2-week in-depth technical audit of your pipelines. We deliver a detailed **Implementation Blueprint** containing database schemas, API pathways, and a calculated ROI Matrix matching costs to expected hours saved. *This audit is fully yours to keep, whether you build with us or your internal dev team.*

## 3. Dedicated Development Sprints

Upon approval, we allocate a team of engineers and an embedded Product Manager. We write code in rapid, bi-weekly cycles, pushing code to active Git environments. You receive live staging links and automated check-ins at every milestone.

**Milind Ranjan**

Founder & Principal Architect, GoRan AI  
Email: [contact@goran.in](mailto:contact@goran.in) • WhatsApp: [bot.goran.in](https://www.whatsapp.com/channel/0029va833333333333333333)

**Ready to automate?**

Submit a scoping request on <https://goran.in> and receive an initial technical feasibility outline within 24 hours.
