

AI AGRICULTURE PLATFORM

Anaaj AI

How GoRan AI executed: rural agricultural consultation & localized database CRM systems

CLIENT PARTNER	PROJECT TIMELINE	BUSINESS IMPACT
Anaaj AI	45 Days	12,000+ Grower Inquiries Resolved
SERVICES DELIVERED		
Multilingual LLM Tuning & Audio Queries, Computer Vision Crop Scanner Modules, ...		

The Challenge (The Operational Pain)

Rural growers in India struggled with delayed crop pest detection, uncoordinated cropping schedules, and lack of real-time price sheets. Legacy applications were too complex, lacked localized speech inputs, and had slow response timelines, hurting crop output.

Audit & Discovery Bottlenecks

Our operational audit found that growers primarily required instant diagnostic image processing, localized speech input, and Mandi price updates. Furthermore, the operational staff lacked a centralized dashboard to track pest outbreaks and configure weather alert updates.

The Engineered Solution

We designed and deployed the Anaaj AI mobile app integrated with localized speech-to-text LLM assistants. We built a crop-health scanning model that parses crop images in under 10 seconds. Finally, we engineered a centralized growers database CRM that maps outbreaks and schedules crop planners automatically.

Business Outcomes & ROI

Successfully scaled to automate over 12,000 grower crop inquiries, cutting administrative support workload by 85%. Crop disease scanning reached a 94% diagnostic accuracy rate, dropping crop risk profiles significantly.

Key Implementations:

- Multilingual LLM Tuning & Audio Queries
- Computer Vision Crop Scanner Modules
- Seasonal Crop Planner & Notification Engine
- Enterprise Administration Dashboard CRM

E-COMMERCE AI ARCHITECTURE

HerbsEra

How GoRan AI executed: Deploying unified storefront tech stacks, centralized CRM data pipelines & AI calling agents

CLIENT PARTNER	PROJECT TIMELINE	BUSINESS IMPACT
HerbsEra	40 Days	92% Customer Inquiries Automated
SERVICES DELIVERED		
Centralized CRM Data Integration, Automated Customer Engagement Bot, ...		

The Challenge (The Operational Pain)

Rapidly scaling e-commerce brand HerbsEra faced fragmented client interactions. Customer queries, order dispatch logs, and cart abandonments were scattered across disjointed systems. Sales agents struggled with manual calls, yielding low conversion rates and high support overhead.

Audit & Discovery Bottlenecks

A funnel friction audit indicated that 78% of incoming customer tickets were repetitive support questions (order dispatch, returns, and consultations). Consolidating customer profiles and implementing AI callers would unlock substantial customer success capacity.

The Engineered Solution

GoRan AI built a centralized data CRM warehouse integrated with HerbsEra's Next.js storefront. We deployed automated WhatsApp customer service agents to route updates. We also built and deployed an AI voice caller powered by Gemini Realtime API and LiveKit to recover abandoned carts and conduct automated customer service surveys.

Business Outcomes & ROI

Automated 92% of standard customer support queries. Eliminated manual calling overhead for tracking, saving 40+ staff hours per week. Direct cart recovery sequences boosted checkout conversions by 22%.

Key Implementations:

- Centralized CRM Data Integration
- Automated Customer Engagement Bot
- Low-Latency AI Voice Caller Integration

- WhatsApp Cart Recovery Sequences

E-COMMERCE & LOGISTICS AUTOMATION

Hadoti Farms

How GoRan AI executed: Automating fresh produce logistics & headless D2C purchase gateways

CLIENT PARTNER	PROJECT TIMELINE	BUSINESS IMPACT
Hadoti Farms	30 Days	3.5x Increase in Monthly Order Volume
SERVICES DELIVERED		
Headless Storefront Development, Automated Inventory Synchronization, ...		

The Challenge (The Operational Pain)

Hadoti Farms aimed to deliver fresh farm produce directly to consumers. However, their inventory was highly time-sensitive. Relying on manual spreadsheet entries for stock levels led to overselling, inventory mismatch, and delayed delivery updates, which caused customer friction.

Audit & Discovery Bottlenecks

To scale D2C fresh produce delivery, Hadoti Farms required real-time stock-to-order synchronization. The ordering process had to trigger automated dispatch alerts to the sorting warehouse instantly, and customers needed transparent, step-by-step notifications regarding harvesting and shipping.

The Engineered Solution

We developed and deployed a headless, lightning-fast e-commerce application hosted on Vercel. We built a custom inventory synchronization system that tracks fresh stock levels in real time and automatically pushes order tickets to the warehouse dispatch hub. Furthermore, we integrated a WhatsApp Cloud API notification engine that sends automated status updates (harvested, packaged, shipped, out for delivery) with live tracking links.

Business Outcomes & ROI

Hadoti Farms boosted monthly order volume by 3.5x within 60 days. Manual order tracking errors fell to zero. Automated WhatsApp updates reduced order inquiry support load by 94%, allowing the company to scale operations smoothly across multiple cities.

Key Implementations:

- Headless Storefront Development
- Automated Inventory Synchronization
- WhatsApp Dispatch Notification Engine

- Logistics CRM Pipelines

PREMIUM WEB PLATFORM

Codewave

How GoRan AI executed: Re-engineering a high-fidelity interactive digital presence and SEO architecture for Codewave

CLIENT PARTNER	PROJECT TIMELINE	BUSINESS IMPACT
Codewave	20 Days	200% Web Engagement Increase
SERVICES DELIVERED		
Interactive UX/UI Platform Development, Advanced GSAP Layout Transformations, ...		

The Challenge (The Operational Pain)

Codewave, a boutique IT consulting firm, had an outdated, static web presence that didn't showcase their technical capabilities. Bounce rates were high, page load speeds were lagging, and a lack of proper SEO structure resulted in zero organic client leads.

Audit & Discovery Bottlenecks

An audit of website behavior revealed that visitors lost interest within 5 seconds due to boring layouts. The site required a premium aesthetic featuring fluid scrolling, layout transitions, and high-performance micro-interactions, combined with a clean HTML structure to pass Google's crawler requirements.

The Engineered Solution

We designed and coded a custom React.js web platform from scratch. We built fluid page transitions, horizontal scroll blocks, and interactive element cards powered by GSAP and Framer Motion. We fully optimized all assets for sub-second speeds and implemented a semantic HTML/schema framework for high-rank SEO indexation.

Business Outcomes & ROI

Codewave experienced a 200% increase in average session duration and a 45% reduction in bounce rate. Google PageSpeed scores hit 99/100, and organic search impressions grew by 150% in 45 days, generating a reliable flow of inbound corporate leads.

Key Implementations:

- Interactive UX/UI Platform Development
- Advanced GSAP Layout Transformations
- Sub-Second Page Load Optimization

- Semantic HTML/Schema SEO Engineering

AI LEAD MANAGEMENT & ROUTING

GreenWrench

How GoRan AI executed: Developing a field service portal and automated AI lead router to optimize GreenWrench operations

CLIENT PARTNER	PROJECT TIMELINE	BUSINESS IMPACT
GreenWrench	28 Days	88% Faster Lead Response Time
SERVICES DELIVERED		
Booking Intake Web Application, Geographic Lead Routing Database Logic, ...		

The Challenge (The Operational Pain)

GreenWrench was flooded with repair and maintenance leads from multiple cities. Their manual dispatch system struggled to match incoming tickets with field technicians by location and workload. This mismatch led to long response delays, scheduling conflicts, and lost deals.

Audit & Discovery Bottlenecks

We audited their scheduling records and realized that manual lead assignment was their primary bottleneck. By designing a web portal with a logic-driven routing database, leads could be mapped instantly to technicians based on GPS coordinates, schedule availability, and area of expertise.

The Engineered Solution

We built a responsive booking portal for GreenWrench and built a custom backend service router. The router parses client requests, maps technician geographic coordinates, and automatically assigns work orders to the closest available engineer. The technician receives an automated notification on WhatsApp containing complete task requirements.

Business Outcomes & ROI

Lead response times dropped from 4 hours to under 2 minutes. Dispatch team administrative workload was slashed by 90%, and technician utilization rates rose by 34%, eliminating missed repair opportunities.

Key Implementations:

- Booking Intake Web Application
- Geographic Lead Routing Database Logic
- WhatsApp Lead Dispatch Triggers

- Central Field CRM Infrastructure

ROBOTICS WEB & AUTOMATION

A Robotics Services

How GoRan AI executed: Engineering a premium digital hub and intelligent service-booking ecosystem for A Robotics Services

CLIENT PARTNER	PROJECT TIMELINE	BUSINESS IMPACT
A Robotics Services	35 Days	65% Diagnostic Bookings Automated
SERVICES DELIVERED		
High-End Corporate Branding Web Platform, Interactive Diagnostic Intake Flows, ...		

The Challenge (The Operational Pain)

A Robotics Services provides complex diagnostic and repairs for industrial robots. Their digital presence was outdated, and client onboarding was slow. Arranging diagnostic trials, scheduling on-site repair visits, and logging issues required long email chains and manual entries.

Audit & Discovery Bottlenecks

The client intake process was highly structured: robot brand, model type, error code, and severity. By automating this intake sequence through an interactive web portal, the system could pre-diagnose issues and propose appropriate appointment slots directly from technician calendar APIs.

The Engineered Solution

GoRan AI built a premium, modern robotics service platform with rich 3D-feeling graphics. We engineered an intelligent onboarding and diagnostics portal that guides users through a technical symptom check. The system logs these issues into their central database CRM, generates a diagnostic report, and schedules service visits automatically.

Business Outcomes & ROI

65% of all diagnostics bookings are now processed with zero manual administration. Booking error rates were reduced to zero, and diagnostic onboarding time fell from 3 days to under 5 minutes. The website now serves as a high-conversion automated business hub.

Key Implementations:

- High-End Corporate Branding Web Platform
- Interactive Diagnostic Intake Flows
- Autonomous Lead Scoring & Routing

- Calendly & Team Calendar Integrations
